WE LIGHT UP OUR CUSTOMERS' BUSINESS

Since 1984, we have designed and produced lighting solutions thinking of light as a lever for the growth of our customers' business. A complete architectural range for **indoor and outdoor spaces**, with a calling for architectural lighting solutions.

A CONSTANT SEARCH THAT COMBINES INNOVATION AND EXPERIENCE

A focus on performance lies at the centre of our design philosophy, an attention that increasingly centres around **technological and stylistic research**, so that we can be ready to provide innovative and high performance solutions to a market in constant evolution.

The design ideas, stemming from the skills acquired over **years of experience**, mould with the input that we collect from the lighting sector and with the cooperation with the **best international design companies**.

2020 HONORABLE MENTION

**EUROPEAN
PRODUCT
DESIGN
AWARD**

www.productdesignaward.eu

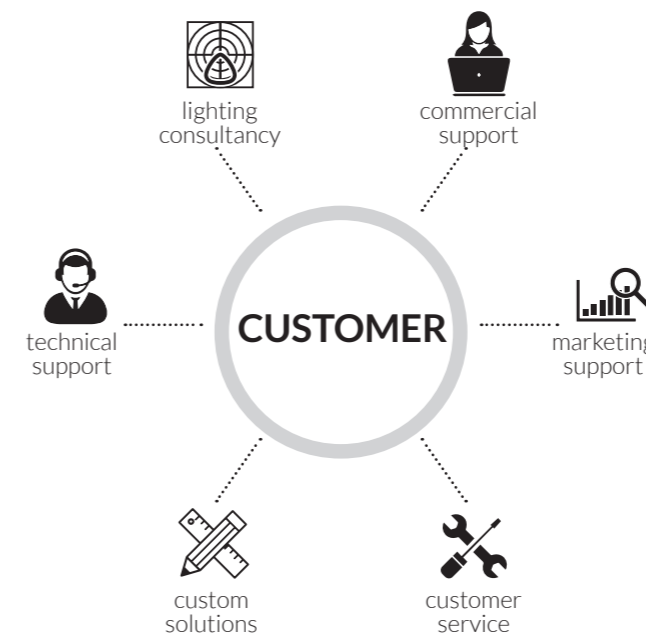

PRODUCTION THAT FOCUSES ON DETAIL AND QUALITY

Quality products are the best way of standing out in a market as competitive as that of lighting. Our products are manufactured with the care and experience of an artisan workshop, combined with the important support offered by the **most innovative technologies** and the collabo-

ration with **research laboratories and universities**. This attention permeates the entire process, from the design stage to prototyping and testing, all the way to mass production, a chain whose **quality is painstakingly and constantly monitored** by an internal quality control system.

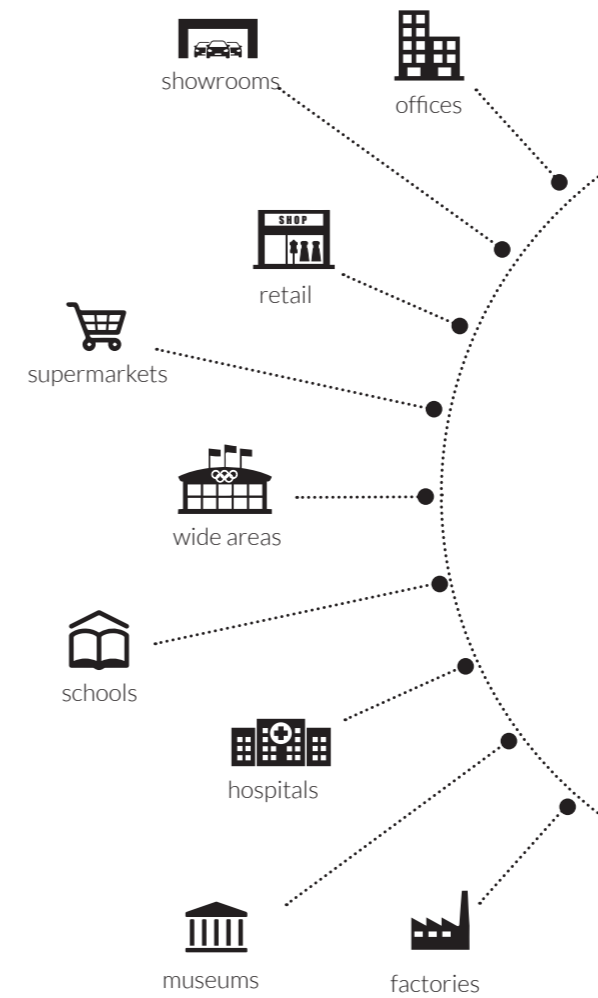

THE VALUE OF CONSULTANCY AND SERVICE

The customisation of a product is always a fresh and motivating challenge. On the one hand, it allows us to help customers bring to life their architectural project, by taking care of lighting in the most minute details; on the other, it enhances our ability to evolve in harmony with the market, providing us with incentives to constantly enrich our range with successful solutions. From design to purchase and all the way to after-sales service, we offer **continuous technical advice**, combined with **fast response times** and the full availability of a team of highly qualified experts.

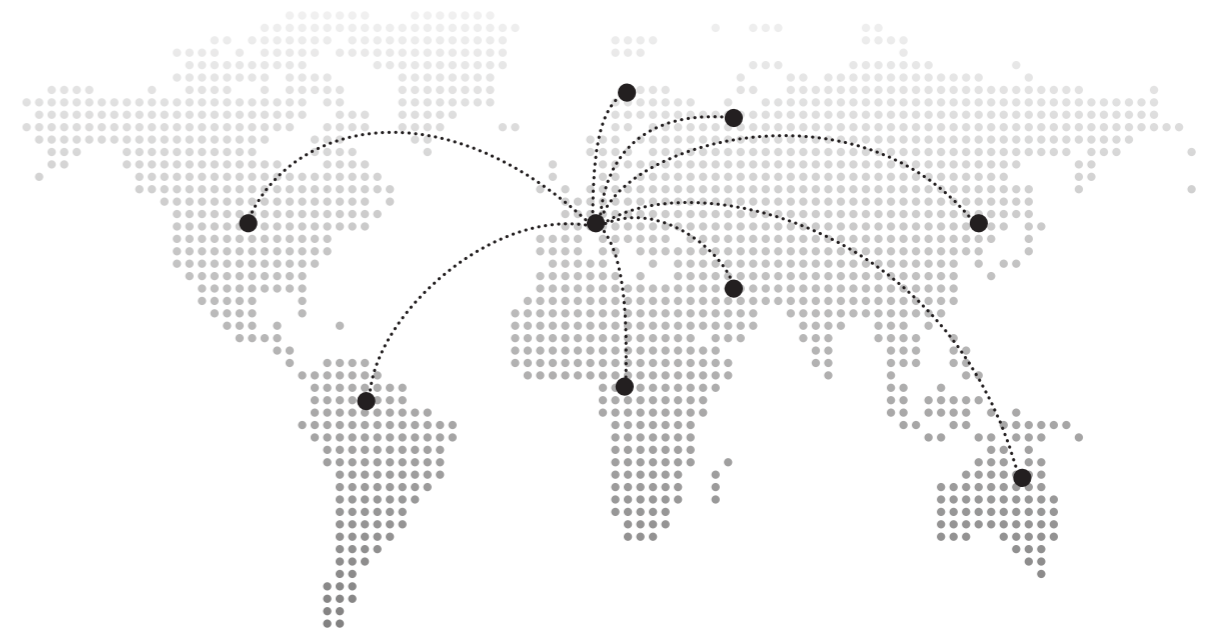

SOLUTIONS DESIGNED FOR ALL FIELDS OF APPLICATION...

For many years, Esse-ci have lit not only **offices, commercial buildings, schools** and **universities**, but also **museums, theatres, conference halls**, the entire **retail** and **mass retail** sector, as well as **specialist clinics** and **hospitals**. We also have products suited to **large public infrastructure** projects, such as train and underground stations.

Our success has been rewarded to us over time with the continued trust of the market, allowing us to contribute to **large architectural projects**, also in the within of outdoor as well.

...AND
EVERYWHERE
IN THE WORLD

Each day, we distribute our products **from Italy throughout the world**, selected to meet the needs of the most diverse settings, from boutiques in Dubai to the Moscow underground, from Sydney offices to the Chicago public library; all situations with different needs and peculiarities that our technical staff are able to handle by developing the most suitable project solutions.

ESSE-CI TECHNOLOGY

The **Internet Of Things** will be the next industrial revolution and **intelligent lighting will play a decisive role** in this process.

Modern lighting systems are designed as an integral element of the ambience comfort and the professional management of energy efficiency.

Managing also means **simplifying** the procedures of control, monitoring the activities and performance of the lighting, **focusing on the end user's needs**.

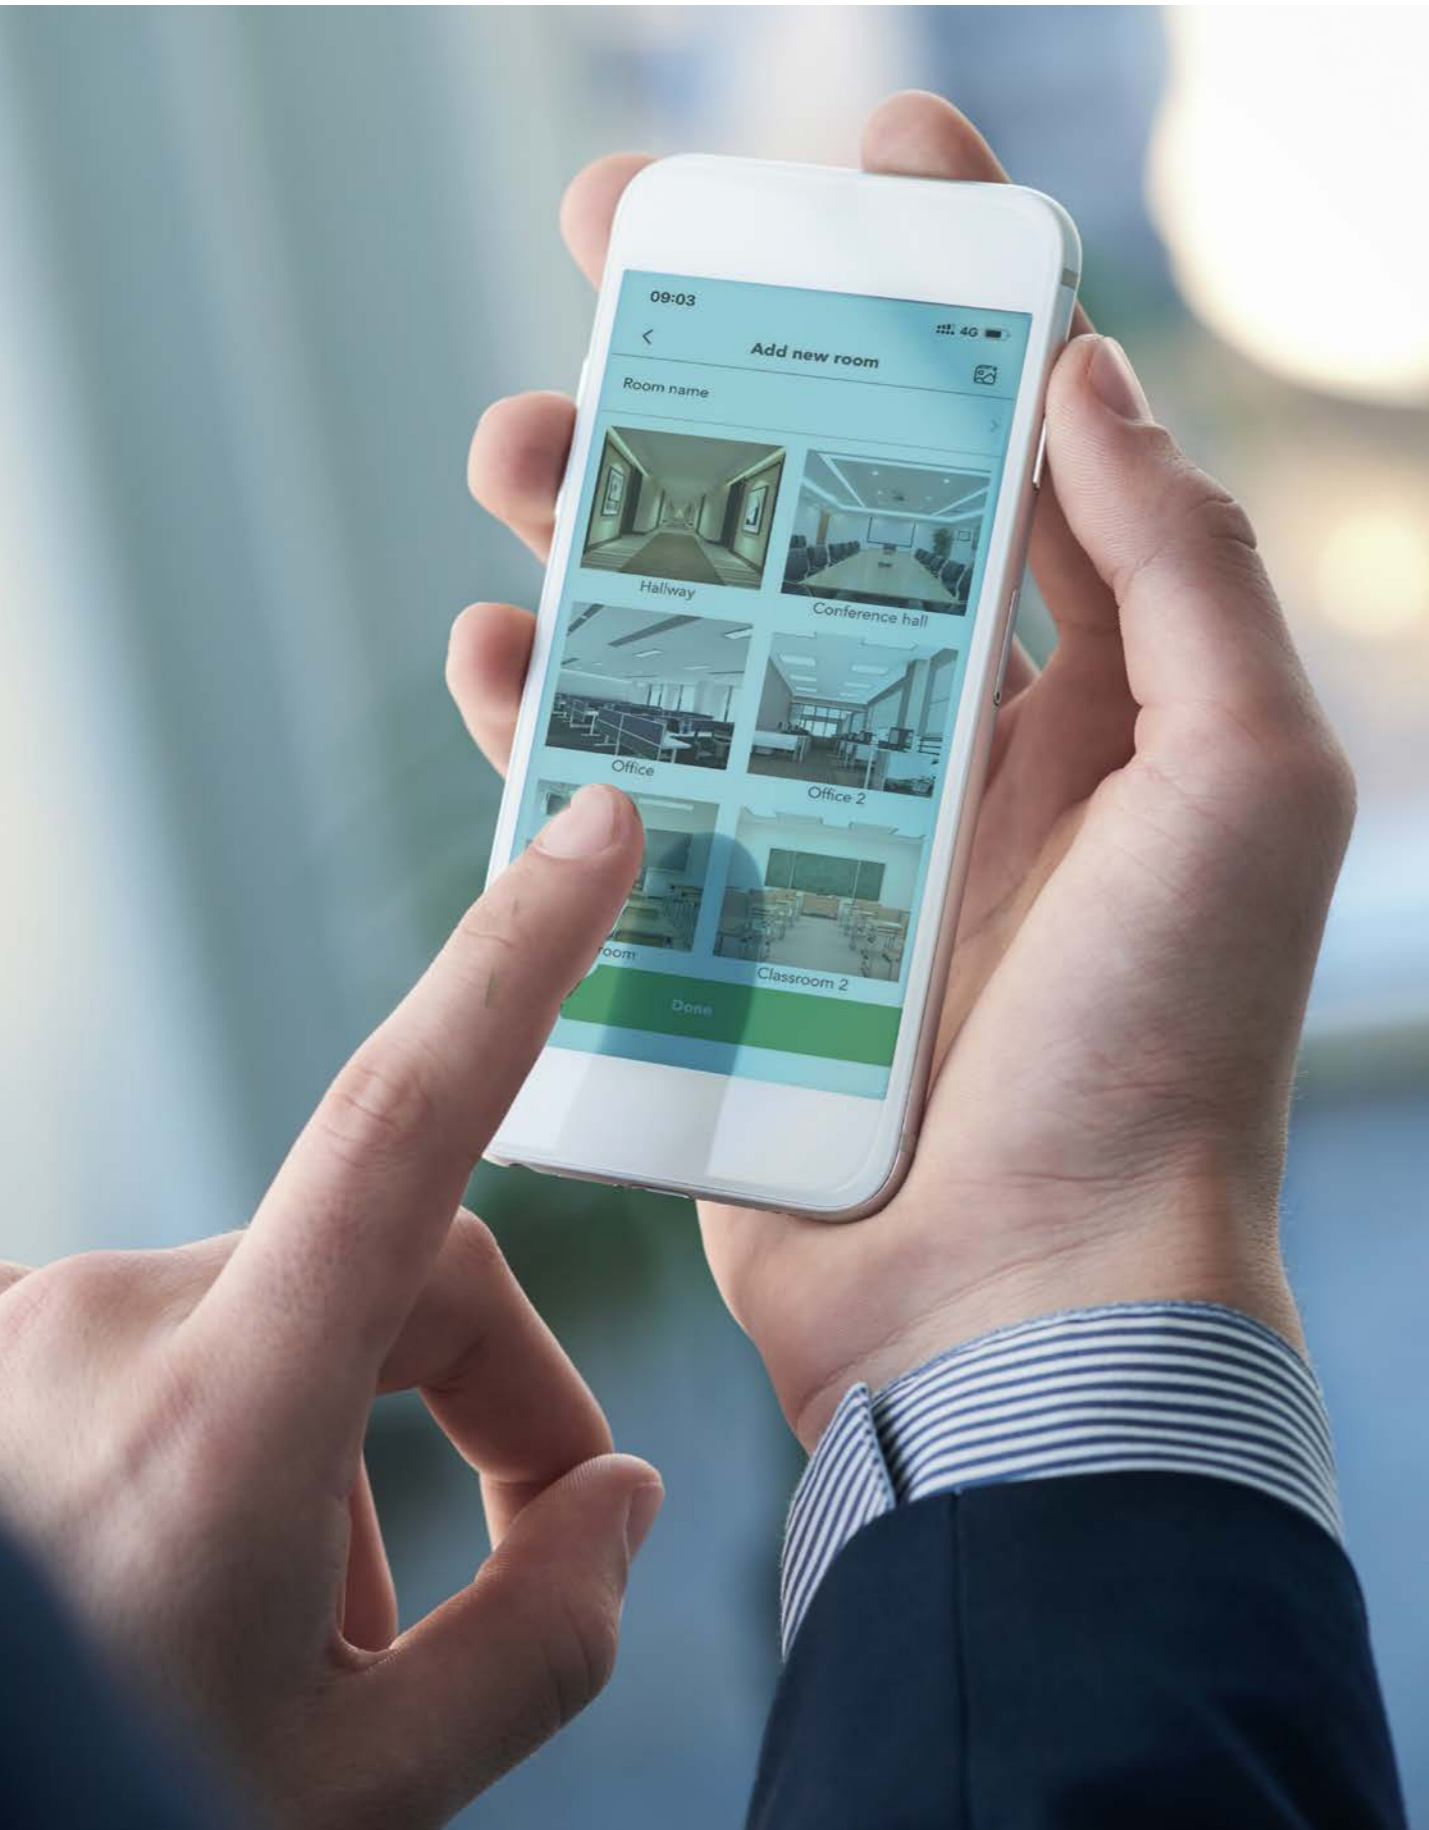

LIGHT MANAGEMENT

LIGHT: WHEN IT IS NEEDED,
AS MUCH AS IS NEEDED,
AT MY COMMAND

Light fixtures are increasingly technologically advanced and at the user's service. Thanks to modern management systems that also enable the collection of information, **fixtures become part of a system design infrastructure** that helps us save

energy, improve comfort and "map" the system, interacting with its user. ESSE-CI has developed light management solutions that can be installed independently (stand alone) and connected (wired or wireless) or fully integrated in the luminaires.

DALI - The DALI (Digital Addressable Lighting Interface) communication protocol is a standard for the **control of light fixtures in light management**. For each DALI line, it is possible to control up to 64 addresses and/or 16 groups.

BT - Bluetooth on the Casambi interface which makes it possible, through remote control from an App, to **manage the network of fixtures or wireless sensors** (e.g. presence/light sensors). The same network can contain 127 nodes, with the option of controlling multiple networks at the same time.

HCL - The HCL system **reproduces light's natural rhythms in all indoor spaces**, with numerous benefits for the human body: biorhythms are regularised, mood is improved, and productivity is increasedimprovement of mood and increase of productivity.

BE - Bluetooth Easy Connect is a new wireless management system that offers a range of fixtures which, by communicating **via Bluetooth**, make it possible to **manage medium-sized systems fully automatically** and with endless scalability options for building automation.

BEACON - Small programmable devices, integrated in the fixture, that **use Bluetooth technology** to check for smartphones or tablets and communicate with them. This technology, in fact, makes it possible **to send information and a wide range of contents** (texts, photos, videos, documents, questionnaires, and much more).

QUALITY AND SAFETY

LIGHTING WITHOUT RUINING

The task of lighting in product presentation is not simply to illuminate: it must have the most suitable **colour temperature**, the specific **colour rendering index**, **thermal management** consistent with the environment and **certified to be harmless**. The list of products that poorly respond to heat and IR radiation is very wide: fabrics fading, cosmetics blending, bakery drying out, chocolate and sweets melting.

ESSE-CI has a deep sensibility, a careful **attention to well-being** and several years of experience: since a long time we have been successfully lighting up the Retail world and we carefully choose innovative technologies, always favouring high quality LEDs emitting light **free from any harmful IR or UV radiation**. The risk that colours and materials are altered is reduced to the minimum.

LED FOR SPECIALIZED APPLICATIONS

LED colours for specialized applications: to emphasize **what consumers really want** and give products an attractive and vivid colour.

FOOD LED MODULES

Specific LED modules to valorise **meat, bread/pastry, fish and vegetables**: the food just looks better and it's visually more attracting. The white elements remain white and the colors are more brighter and intense. A specialized optics and a dedicated colour spectrum for fresh foods create further attractiveness and enhance quality, **without generating heat or harmful radiation** that can ruin the products appeal.

FASHION LED MODULES

Light spectrum optimized for warm and saturated colours, together with a pure and cold white, **makes the clothes shine** creating a harmonious environment. Lighting plays a key role in product presentations, especially when it comes from the fashion world: it's very important to emphasize materials, colors and show the quality level of the garments.

ACHIEVEMENTS

ADEQUATE LIGHTING TO THE TARGET GROUP

The protagonist is not the light, but the role it must play.

Light creates atmospheres designed on the customer's needs, **highlights the products**, not itself, and fits in **with the style** and taste of the space that it's asked to light up.

By changing intensity, contrast, colour temperature, direction and uniformity of light, we can create different scenes and follow current trends and emotional needs of the customers.

SPONSORSHIP

With great enthusiasm and pride ESSE-CI welcomed the opportunity to be actively involved, together with prestigious teachers, in the learning experience intended to **train ambitious young architects.**

Thanks to the skills and experiences we share as a heritage, we build an excellence competence on any issue that composes the design of architecture for the fashion and wellness world.

The aim is to **transfer the sensitivity to the use of lighting in architectural design** as a tool to serve the human being, through a path that will make the future young architects understand the value of light, technology and their conscious use.
